

REMOPLA DOUBLE SIDED

Application

Double sided Remopla mats are the optimal solution for fragile surfaces that need to be protected for short periods of time.

This material is particularly suited for the protection of athletic tracks, tennis courts, ice rinks, sports flooring, etc. It can also be used to create work platforms without specific surface preparation. This flooring system makes it possible to give access to forklifts, cars, trucks and cranes on your site.

Our double sided Remopla, in combination with a plastic underlay, are the ideal protection of e.g. the sports floor in your sports hall during events.

Properties

Remopla panels are thin though heavy seamlessly connectable black mats. When used on a flat subsurface, they create a sealed and even surface.

Both sides of the mats are provided with studs.

Laying the mats

The mats are laid by hand.

We supply geotextile as an underlay to protect fragile surfaces as well as our tiles from dirt.

We handle pickup and delivery, and can also see to the installation, dismantling and final cleaning upon request.

Deliveries

We supply Remopla on pallets.

We require a 2.5T forklift on site to load and unload our trucks.

Environmentally friendly, durable and economical

Remopla is made of 100% recycled rubber and can be recycled again once discarded after having been used for a very long time.

Remopla helps us conserve our natural resources.

REMOPLA DOUBLE SIDED: TECHNICAL SHEET

- This model can be used on both sides and is mainly rented for indoor solutions, e.g. to protect floors in sports halls. It can also be used outdoors to protect athletic tracks.
- Weight per mat: 24 kg
- Dimensions: (l x w x h) 1.2 x 0.8 x 0.022 m
- Colour: black
- Material: recycled rubber, 100% recyclable, biologically and ecologically sound
- Environmental influences:
 - Heat resistant up to 60° C
 - Cold resistant
 - UV stable
 - Fireproof B2
- Maximum load per mat: 35 kg/ cm²
- Easy to lay by hand
- Transport: max. 920.96 m² per trailer
